

YOUR CHOICE TO PERFECTION

Since its establishment in 1921 Sakura has constantly been working on realizing innovative colouring, marking and writing instruments. As inventor of various products such as the oil pastel Cray-Pas and the gel ink technology for gel pens, Sakura has without a doubt radically changed our view of colours and writing. This constant strive towards innovation can be seen in our product range, varying from drawing instruments for creative applications at the highest level to functional writing materials for the home, office and industry.

**Sakura,
Japanese innovation in marking and writing.**

SAKURA CRAY-PAS

Cray-Pas from Sakura is still, almost a century later, the main oil pastel used by children and artists throughout the world.

Everyone knows Cray-Pas. Worldwide, millions of children have learned to draw and colour with this superior oil pastel crayon. Not surprising therefore that school kids also show a preference for Cray-Pas. Artists also use Cray-Pas for their creations, because they want to work with the best materials. Sakura came up with this product almost a century ago. Cray-Pas is still the definitive Oil Pastel. That is indisputable, because the well-balanced range of colours, the fantastic opacity, the massive colouring power, the unique Sakura pigments and the easy application are simply unique.

CRAY-PAS EXPRESSIONIST

Extra fine Quality Oil Pastel; the standard crayon, which all other oil pastels emulate. With Expressionist, it is possible to imitate the effect of oil paint. With stump to extend the colours.

CRAY-PAS JUNIOR

Cray-Pas Junior is a soft oil pastel, developed as the ideal drawing and colouring material for children between the ages of 4 and 10. Thanks to the softness of the crayon and the intense pigments used to colour the oil pastel, Cray-Pas can be used for various techniques. It comes in 50 colours.

SAKURA PIGMA

Sakura developed and patented PIGMA ink in 1982. It was the first ink in the world in which pigment and water were combined. This ink has since then become the standard for reliable, permanent, archival quality ink. Although it was originally developed as a technical drawing instrument, PIGMA is now used for numerous applications.

PIGMA MICRON

PIGMA Micron comes in seven nib sizes for drawing precise lines. The PIGMA Micron is loyally used by designers, scientists, archivists, manga artists, cartoonists, illustrators and hobbyists. It is the recommended pen for Zentangle®. If you need to place your signature or wish to illustrate something, PIGMA Micron is the right choice.

SOLID MARKER

Solid Marker is solidified paint in a marker stick. An extremely tough marker for tough jobs.

The Solid Marker marks through oil, grease, rust, mud and snow on both rough and smooth surfaces. The ink dries quickly and does not fade. The Solid Marker even marks and dries under water! The special twist mechanism in the Solid Marker keeps the paint fresh and ready to use.

Ideal for use on wood, plastic, steel and iron, fabric, rubber, cardboard, glass, fiberglass and concrete. Due to its limitless applications the Solid Marker is widely used in the construction industry, by welders, in manufacturing, in forestry, for pipelines, on assembly lines, in the automotive tires sector, for HVAC (heating, ventilation, air conditioning) and plumbing systems.

Meths, turps or white spirit-based cleaning agents will remove the ink from non-porous surfaces. The Solid Marker meets the ASTM and ACMI non-toxicity standards and is AP seal certified.

- Waterproof
- Fade resistance
- Chemical free
- Pigment based
- Odorless
- Low Halogen

SOLID MARKER LOW TEMPERATURE

An extremely tough marker for tough jobs in low temperature environments. The Solid Marker Low Temperature has all the properties of the standard Solid Marker, but works at temperatures as low as -40 °C.

Diameter: 12 mm

Ink type: Pigment alcohol ink

Working temperature: -40 °C - 100 °C

XSC-T#..

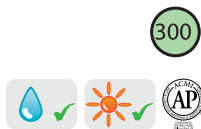

Products bearing this symbol have been evaluated in the US by a medical expert to certify that they do not possess more than the allowable level of materials toxic to humans, and have received certification from ACMI (Art & Creative Materials Institute) in regard to material safety.

SOLID MARKER GLOW IN THE DARK

Meths, turps or white spirit-based cleaning agents will remove the ink from non-porous surfaces. The Solid Marker meets the ASTM and ACMI non-toxicity standards and is AP seal certified.

XSC#300

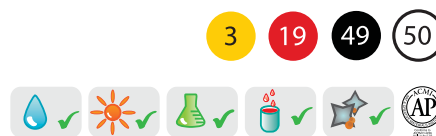

SOLID MARKER LOW HALOGEN

Solid Marker Low Halogen is an extremely tough marker with a low level of halogen, ideal for environments where corrosion and metal fatigue may occur. Possible applications: petrochemical industry and refineries, power plants, desalinization plants, transport, infrastructure and aerospace. The marker contains less halogens (Br, Cl, F, I) and metal ingredients (Zn, Pb, Hg, Cu, Fe, S), meets the RDT F-7-3T requirements and is certified non-toxic. The paint is waterproof, chemical resistant and does not fade.

Diameter: 12 mm
 Ink type: Pigment alcohol ink
 Working temperature: -40 °C - 100 °C

XSC-LH#..

MARKERS

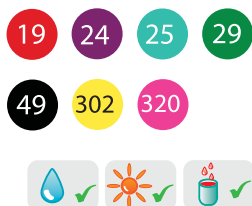

PAINT MARKER FINE

This Paint Marker Fine has a semi-hard fibre tip and contains liquid paint for clear results on any surface, such as wood, metal, earthenware, leather, plastic, glass, paper and cardboard. The quick-drying ink is lightfast, waterproof, chemical resistant and permanently opaque.

Line width: 1 mm
 Ink type: Pigment xylene ink
 Working temperature: 5 °C - 40 °C

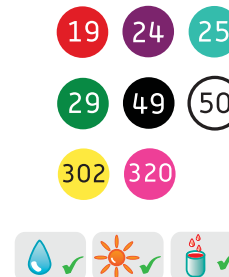

XPMK-B#..

PAINT MARKER MEDIUM

Line width: 2 mm
 Ink type: Pigment xylene ink
 Working temperature: 5 °C - 40 °C

XPMK-B#..

PAINT MARKER LOW HALOGEN

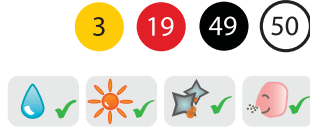

Paint Marker Low Halogen contains less halogens (Br, Cl, F, I) and metal ingredients (Zn, Pb, Hg, Cu, Fe, S), ideal for environments where metal fatigue and corrosion may occur. The Paint Marker can be used on nearly any surface and is xylene free.

Line width: 2 mm

Ink type: Pigment alcohol ink

Working temperature: 5 °C - 40 °C

XPMKB-LH#..

METAL MARKER EXTRA BROAD

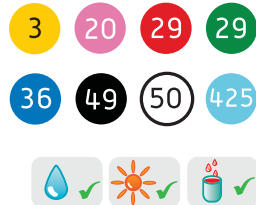

The Metal Marker with an extra broad chisel point for extra clear marks.

Line width: 10 mm

Ink type: Dyestuff alcohol ink

Working temperature: 5 °C - 40 °C

PKK-J#..

SAKURA CRAYON MARKER

This general purpose crayon marker is made for a variety of industrial applications. Made from a wax material and opaque pigments, the crayon marker writes on most wet or dry, rough or smooth surfaces (except on wet glass). Waterproof and highly fade-resistant.

Diameter: 15 mm

Ink type: Pigment and wax

Working temperature: -10 °C - 50 °C

GHY#..

METAL MARKER FINE

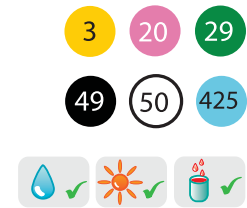

The Metal Marker contains liquid and grease-free ink, suitable for most types of metal such as galvanized steel. Ideal for identification, fill-in marking, signage, safety markings on any surface. The Metal Marker is xylene-free for less odour and meets the PSPC (Performance Standard for Protective Coatings for balast tanks of ships) requirements, so markings are perfect for painting over without leaving any traces or bleeding.

Line width: 2 mm

Ink type: Dyestuff alcohol ink

Working temperature: 5 °C - 40 °C

PKK-S#..

SAKURA WATER-SOLUBLE MARKER

This general purpose crayon marker is made from a water-soluble wax material and opaque pigments, ideal for temporary industrial applications whereby the mark needs to be removed. The water-soluble marker writes on most dry, rough or smooth surfaces, such as glass, PVC, tin, iron, wood, concrete, aluminium, etc. The mark is easily removed from non-porous surfaces using water and a cloth.

Diameter: 15 mm

Ink type: Pigment and wax

Working temperature: -10 °C - 50 °C

**PEN-TOUCH 130 MARKER**

The Pen-Touch 130 Marker is a permanent bullet point marker, with ink based on xylene, ideal for fill-in applications, identification, signage and writing. The marker writes on most surfaces, such as wood, metal, concrete, glass, smooth paper, cardboard and plastic. (Xylene-based inks can dissolve on certain types of plastic. We therefore recommend you test before use).

Line width: 1.2 mm

Ink type: Dyestuff xylene ink

Working temperature: 5 °C - 40 °C

**PEN-TOUCH 140 MARKER**

The Pen-Touch 140 Marker is a permanent chisel point marker, with ink based on xylene, ideal for fill-in applications, identification, signage and writing. The marker writes on most surfaces, such as wood, metal, concrete, glass, smooth paper, cardboard and plastic. (Xylene-based inks can dissolve on certain types of plastic. We therefore recommend you test before use).

Line width: 4.0 mm

Ink type: Dyestuff xylene ink

Working temperature: 5 °C - 40 °C

SAKURA140#..

**PEN-TOUCH EXTRA BROAD MARKER**

The Pen-Touch Extra Broad Marker is a permanent marker with an extra broad 10 x 16 mm tip, with ink based on xylene, ideal for use on large surfaces. The marker writes on most surfaces, such as wood, metal, concrete, glass, smooth paper, cardboard and plastic. (Xylene-based inks can dissolve on certain types of plastic. We therefore recommend you test before use).

Line width: 10.0 x 16.0mm

Ink type: Dyestuff xylene ink

Working temperature: 5 °C - 40 °C

PENS

PIGMA MICRON

Sakura developed and patented PIGMA ink in 1982. It was the first ink in the world that combined pigments with water. This ink has since become the standard for reliable, permanent, archival quality ink. Chemically stable, waterproof and fade resistant. PIGMA Micron comes in seven nib sizes for precise line widths and is used by technical professionals, such as anthropologists, entomologists, scientists, engineers, archivists, architects and is used in research laboratories.

IDENTI PEN

IDentiPen is a multi-purpose pen with two different nibs: on the one side a fine bullet-shaped felt tip and a fine plastic tip for details on the other. The quick drying ink of IDentiPen is permanent, waterproof and nearly odourless. The pen writes on nearly all surfaces, such as paper, cardboard, metal, glass, photos, fabric, plastic and wood.

Line width: 1.0 mm (fine) and 0.4 mm (extra fine)
Ink type: Dyestuff alcohol ink
Working temperature: 5 °C - 40 °C

MICROPERM 01 BLACK

Microperm is a waterproof permanent ink pen for drawing ultra-fine lines, ideal for fine details and precision work. Microperm pen tips have a protective metal sheath around the extended tip to give extra control and increased resilience when used with drawing aids such as rulers. Alcohol-based cleaning agents will remove the ink from non-porous surfaces. The Microperm is ideal for marking slides, test tubes and laboratory glassware, diamond, CD labels and electricity wires.

Line width: 0.1 mm
Ink type: Dyestuff alcohol ink
Working temperature: 5 °C - 40 °C
